

Ammar Ahmad

Haripur, Pakistan | dev.ammar.io@gmail.com | github.com/ammarahmad-io | linkedin.com/in/ammarahmaddev

Professional Summary

AI undergraduate student with strong interest in Agentic AI, LLM engineering, backend systems, and scalable AI applications. Experienced in Python, FastAPI, Docker, frontend development, API integration, LangChain, LangGraph, RAG systems. Passionate about building real-world AI products and continuously expanding expertise in Machine Learning, Deep Learning, Transformers, and LLM fine-tuning.

Education

University of Haripur — Bachelor's in Artificial Intelligence
Current GPA: 3.73 / 4.00

Technical Skills

Programming & Development: Python, JavaScript, React js, Git & GitHub, Docker

Frontend Development: Responsive Web Design, API Integration, UI Development

Backend & Infrastructure: FastAPI, REST APIs, Docker, Ollama, Pydantic, Authentication, Authorization

AI & LLM Engineering: Prompt Engineering, RAG, LangChain, LangGraph, Vector Databases, Multi-Modal AI

Projects

AI Coding Assistant

- Built a CLI-based AI assistant capable of generating and explaining code.

RAG-Based Document Chat System

- Developed a Retrieval-Augmented Generation pipeline using LangChain and FastAPI.

AI Story generator

- An AI-powered story generator for children (0-15 years) that creates personalized stories with illustrations.

Fullstack React js app

- Built and deployed Fullstack React js app with Supabase

Achievements

- Achieved 3.73 GPA in the first semester of Bachelor's in AI.
- Actively building real-world AI engineering projects alongside university studies.
- Strong self-learning focus in modern AI systems and backend development.

Career Objective

To become a highly skilled AI Engineer specializing in Agentic AI, LLM systems, scalable AI infrastructure, and advanced machine learning research while contributing to real-world intelligent applications.
